Summary

Data Analyst serving as the de facto Product Manager for WorkIndia's Candidate Growth team, owning the CLM roadmap and driving product initiatives end-to-end. Partner with engineering and design to prioritize opportunities using an effort-vs-impact framework, translate user insights into product decisions, and execute experiments that improve acquisition, activation, and retention.

Experience

Data Analyst — Growth & Product (CLM), WorkIndia, Bangalore

May 2025 - Present

- Led the OTP onboarding redesign after diagnosing verification as the largest activation bottleneck (delivery-latency and user-behavior analysis). Designed a progressive recovery flow (Primary SMS → WhatsApp → Secondary SMS → OTP Call), sequenced by delivery success, latency, and user effort while introducing saved login tokens for returning users and onboarding a secondary SMS vendor. Partnered with engineering to launch the redesigned experience, improving OTP success from **89.6% to 96.3%**, increasing 5-second delivery from **88.2% to 96.6%**, and achieving **98.2% success** for eligible returning users.
- Hypothesized low job-card conversion stemmed from too few and poorly ordered listings — pagination CTR ran **~2x the Apply rate**, signaling users were paging through to find relevant jobs. Raised listing density from 10 to 20 jobs/page (competitor benchmarking) for a **6% Applies lift**, then designed a custom relevancy-ranking logic that drove a **further 8.1%**.
- Validated communication preferences via surveys — **45%** of users preferred a WhatsApp CTA over calling recruiters directly (**18%**); partnered with engineering and design to add a WhatsApp HR CTA on job cards, increasing **Lands-to-Apply by 30%**.
- Owned experimentation strategy for a **1M+ daily visitor** acquisition funnel, defining hypotheses and validating a **6.2% improvement in Clicks-to-Leads** through statistically significant A/B experiments, informing product rollout.
- Synthesized notification design patterns from leading consumer applications into product recommendations, proposing features such as dynamic backgrounds, countdown timers, keyword highlighting, and multi-CTA layouts. Collaborated with design to evolve the concepts into production-ready experiences and shipped them with engineering, resulting in a **22% increase in notification CTR**.
- Pinpointed send timing as a key engagement-efficiency driver via hourly behavioral, cohort, and notification-level analysis. Designed a send-time optimization system using **contextual Thompson Sampling**, optimizing for **downstream value (applications, retention) over opens** with fatigue-aware frequency caps, reducing blended **Cost-per-DAU by 23%** while saving **Rs. 1.2L** in infrastructure.
- Traced performance differences between in-app job recommendation and retargeting systems, and directed engineering to reuse the higher-performing algorithm through Kafka-based event publishing, reducing **Cost-per-Download by 13%** while increasing **CTR by 16%**.
- Designed a new Email re-engagement campaign at **Rs. 0.17 cost-per-DAU vs. Rs. 1.3 on existing campaigns (~8x more efficient)**, driving **~23% of CLM-channel DAU**.
- Segmented users by engagement to surface under-engaged cohorts, then launched targeted lifecycle initiatives that increased **Daily Active Users (DAU) by 17%**.

Technical Research Analyst, Hevo Data, Bangalore

Jun 2024 - Dec 2024

- Investigated and resolved issues across **80+ distributed ETL pipelines**, improving data reliability for downstream analytics and business reporting.
- Created a Snowflake-based pricing tool used by marketing teams, contributing to a **9% increase in qualified leads**.
- Performed log-level and metric-driven root cause analysis to support system stability and safeguard reporting accuracy.

Research and Development Intern, Samsung Prism, Remote

Nov 2023 - May 2024

- Processed and analyzed **32,000+ documents** using scalable data pipelines for structured information extraction.
- Developed transformer-based summarization models, balancing model accuracy, throughput, and deployment efficiency.

Education

KIIT University, B.Tech in Computer Science

Sep 2021 - Apr 2025

- CGPA: 8.9/10.0

Skills

- **Product Management:** GitHub Projects, Effort-Impact Prioritization, Product Docs (BRD/PRD/ARD/PIR), User Research, Competitive Benchmarking, Stakeholder Management
- **Experimentation & Analytics:** A/B Testing, Cohort & RFM Analysis, Hypothesis Testing, Experiment Design, KPI Tracking
- **Growth & Lifecycle (CLM):** WhatsApp, RCS, SMS, Email, Push, SEO, OTP Onboarding
- **Technical:** Python, SQL, PySpark, Pandas; Git, Kafka, JIRA, Confluence
